

Floor care

SYSTEM PLANNING GUIDE

01 / Before first use

Follow the installer's handover and manufacturer cure schedule for walking, furniture, washing and vehicles. These periods vary by system and conditions.

02 / Routine cleaning

Remove grit with a soft brush or suitable vacuum. Use the approved cleaner and non-abrasive tools. Rinse as instructed and avoid leaving standing liquid.

03 / Spills and chemicals

Follow the spilled substance's safety instructions. Use trained personnel for hazardous spills. Check chemical compatibility with the floor supplier; no resin floor resists every substance.

04 / Protect the finish

Use suitable entrance mats and furniture protection. Do not drag sharp objects. Avoid unapproved solvents, abrasive pads or steam / pressure cleaning.

05 / Inspect and repair

Inspect wear, joints, drains and edges. Report cracks, blistering, exposed aggregate or changed slip performance. Arrange repair before damage spreads.

06 / Keep a record

Keep the system name, product data sheets, cleaning schedule, handover date and maintenance history. Ask Osmani Floor for a system-specific care plan.

General care guidance. The selected product documentation and site-specific handover take precedence.
