Warehouse

SYSTEM PLANNING GUIDE

Industrial epoxy for forklifts, racking aisles, and large production halls.

Planning guidance only. Not a certified TDS, SDS, purchase specification or mixing recipe. Obtain the selected manufacturer's current documents before application.

01 / SYSTEM AT A GLANCE

System: Industrial epoxy coating

Use: Warehouses, logistics, production, workshops

Indicative thickness: 2 – 5 mm

Substrate: Concrete slabs, power-floated floors

Finish: Wear coat, optional PU UV lock

02 / MATERIALS TO SPECIFY

1. Repair / levelling materials and primer
2. Industrial epoxy binder + hardener
3. Graded filler / aggregate where specified
4. Compatible wear coat
5. Joint sealants and traffic marking materials

03 / CHECK BEFORE ORDERING

Record wheel types, point loads, turning zones and phased access.

Record floor area, surface condition, moisture testing, repairs, joints, temperature / humidity and site access. Confirm compatibility, consumption per layer, waste allowance, pot life, recoat windows and cure times with the supplier.

Equipment: suitable preparation and dust extraction, approved mixing / application tools and PPE specified by the SDS. Application by trained installers.

SYSTEM PLANNING GUIDE

Fill in, save and email this sheet to floorosmani@gmail.com. Leave unknown technical values blank for the site assessment.

Name / company

Email / phone

Project address / area (m²)

Existing surface / moisture / cracks / joints

Traffic / loads / water / chemical exposure

Colour / finish / slip requirement

Access / preferred dates / allowed downtime

Supplier / product codes / quantities for each layer (to confirm)

Questions / site notes / documents required

Attach site photos and request the final TDS, SDS, system build-up and care schedule with your quotation.
